WART TREATMENT

Treatment of warts is difficult. To maximize cure, 17% salicylic acid products sold over the counter are recommended for home therapy. They may be applied two to three weeks after liquid nitrogen treatment. Some name products include Paplex, Duoplant, Viranol, and Occlusal and are applied once or twice daily depending on which one you purchase. If the wart(s) persist for greater than six weeks, retreatment with liquid nitrogen may be necessary
